

> Platform Stairlift

The Gartec Platform Stairlift is suitable for indoor or outdoor use and is functional, compact and reliable. Fully automatic, convenient and easy to operate, the lift is designed for use on straight flights of stairs making it suitable for access in most buildings.

The lift can be folded and parked when not in use. This provides clear access to the staircase for other users, making it suitable for installation in areas where space is at a premium. The user can call the lift even when folded and installation is simple and straightforward.

The lift can be adjusted for right or left hand fixing and is fastened directly to a wall or supported by stanchion posts.

The lift can be operated independently by the user or attendant controlled via a wander-lead. The option of a fold down seat further enhances its versatility.

When a user boards the lift and moves the joystick control in the desired direction of travel, the barrier arms and ramps fold down automatically. The user can stop the lift at any time and safety sensors will halt movement automatically if it meets an obstruction on the staircase.
